Hach AV9000 Area Velocity Flow Analyzer Module for use with Sigma Area Velocity Flow Sensors and Hach FL900 Flow Loggers

Frederick, Maryland August 2011 – Hach Company is pleased to announce the release of its latest open channel flow monitoring solution, the AV9000 Area Velocity Analyzer Module for use with its Sigma Submerged Area Velocity Sensor and FL900 Series Flow Logger.

The AV9000 Analyzer Module utilizes user-friendly advanced diagnostic tools to further increase reliability and accuracy even in difficult sites such as those with non-uniform particle composition and turbulent flows. When used with the Hach FL900 Series Flow Loggers, Hach AV9000 users can easily access their flow data, set up event/alarm notifications and change meter programming via the internet 24/7 with FSDATA Flow Data Manager.

System plug-n-play design of the AV900 Analyzer Module allows current customers to utilize their existing Sigma Sub AV Sensors and FL900 Flow Loggers.

About Hach Company Flow Products & Services

[Hach Company Flow Products and Services](#), a world-class manufacturer of innovative and reliable open channel flow meters, is the first choice for flow professionals in the wastewater industry. Flow meter innovation, reliability, and accuracy are the hallmark of our products as well as an unrivaled support and sales network. The combined strengths of Hach's Sigma and Marsh-McBirney flow meters provide our customers with over 75 years of flow experience. Hach Company is a wholly owned subsidiary of Danaher Corporation (www.danaher.com), a fortune 500 leader.
