Hach FL900 Series Flow Meters Offer An Extensive Selection of Sensor Technologies to Solve Any Sewer Flow Challenge

Loveland, Colorado—February 2013

Hach Company Flow Meter Products & Services is pleased to announce that the Hach FL900 Series Flow Meter Family now offers an extensive selection of sensor technologies to accurately and efficiently solve any sewer flow monitoring challenge.

With the recent addition of two new ultrasonic sensors, the Hach US9001 In-Pipe and Hach US9003 Down-Looking, the Hach FL900 system now offers level-only alarming and redundant-level functionality. In addition to the ultrasonic level sensor technology, radar, electromagnetic and acoustic Doppler velocity technologies are also available. The plug-and-play design of the Hach FL900 system allows for up to four sensor connections with auto-detection of sensor type, allowing users maximum flexibility for their Hach flow meter inventories.

The two new ultrasonic sensors are also available with Hach's Data Delivery Services (DDS) Program. DDS uses wireless Hach FL900 Series loggers and sensors and provides real-time unedited flow data through FSDATA web-based software. Several DDS packages are available depending on specific needs. DDS can expand a firm's project capabilities by providing a reliable wireless flow meter inventory or completely eliminate all of the hassles of flow monitoring including installation and maintenance.

About Hach Company Flow Products & Services

[Hach Company Flow Products and Services](#), a world-class manufacturer of innovative and reliable open channel flow meters, is the first choice for flow professionals in the wastewater industry. Flow meter innovation, reliability, and accuracy are the hallmark of our products as well as an unrivaled support and sales network. The combined strengths of Hach's Sigma and Marsh-McBirney flow meters provide our customers with over 75 years of flow experience. [Hach Company Flow Products and Services](#) is a business unit of [Hach Company](#), the worldwide leader in manufacturing and distributing analytical instruments and reagents used to test the quality of water and other liquid solutions.
